

The New 1500A Counter Station

Model 1500A

This next generation Intercom Counter Station is smaller, more flexible, and has even more options than the original Model 1500. We designed the 1500A to take up less counter space by mounting the speaker under the keyboard while preserving the best sound quality in the industry. The keypad is the same popular design... durable, flexible and easy to use. When privacy is required at the Counter Station, the new Model 1500AH provides a compact handset and cradle.

The new video add-on design is not only smaller, its adjustable support enables it to fit easily into any work environment. The Model 1502 provides two-way video, the Model 1501 provides inbound video, and both units are also available in a wall-mount version (1502W and 1501W).

FEATURES:

- Excellent two-way audio performance
- Compact 7 x 7.25" footprint (Model 1500A)
- Video add-on adjusts from 12 to 15 inches in height
- Durable, easy to clean, touch-sensitive keypad – no moving parts
- Keypad can be customized for 1 to 16 lanes (hub required)
- Lane camera up/down controls for video applications
- Convenient headset jack for wireless operation
- Privacy feature bypasses mic & speaker when headset or handset is in use

Model 1500AH with 1502 video add-on

New Features Include:

- Smaller footprint
- Adjustable height video
- Handset option

Series 1500 Example Configuration 1:1 Audio/Video Intercom System

Installation Simplicity

Even with all these features and options, the Series 1500 Intercom is still a snap to install. A single Cat 5 cable is all that is required to connect the Counter Station and the Customer Station. A wireless headset can be added to the Counter Station for convenient mobility. Two-way video is simple to add to any system with a single Cat 5 connection at either end.
